MICS INTERNATIONAL

Workflow Documentation

A comprehensive reference for the MICS International Zoho ecosystem — covering ownership rules, lead-to-cash flow, service delivery, HR operations, automation logic and governance across 19 sections and 46 pages.

VERSION	EFFECTIVE DATE	PAGES	OWNER
V4.0 — Final	15 April 2026	46 pages · 19 sections	Office of the Partners

MICS

Table of Contents

This document is organized into three logical parts. Part I establishes the foundation — who, what and how. Part II documents the core lead-to-cash process. Part III covers delivery operations and governance layers.

PART I · FOUNDATIONS

Who, What, How

1 · Executive Summary & System Overview 03 — 04
2 · Organizational Structure & Role Hierarchy 05 — 07
3 · Employee Code System & Directory 08 — 09B

PART II · LEAD TO CASH

Sales & Revenue Flow

4 · Lead Management Workflow 10 — 13
5 · Deal & Sales Pipeline Workflow 14 — 17
6 · Proposal & Approval Workflow 18 — 19
7 · Payment Gate & Invoice Workflow 20 — 21
8 · Execution & Service Delivery Workflow 22 — 24
9 · Service Frequency & Renewal Management 25 — 26

PART III · OPERATIONS & GOVERNANCE

Performance, People, Rules

10 · Sales Targets & Performance Tracking 27 — 28
11 · Client Ownership & Attribution Rules 29 — 30
12 · External Referral & Commission Tracking 31
13 · HR, Attendance & Leave Workflows 32 — 34
14 · Recruitment Pipeline Workflow 35 — 36
15 · Marketing & Communication Workflows 37 — 38
16 · Document & Credentials Management 39 — 40
17 · Automation Rules Reference (50+ rules) 41 — 42
18 · Access Control & Security Matrix 43 — 44
19 · Integration Architecture 45

Executive Summary

MICS International delivers comprehensive financial, tax, audit and business advisory services to clients across the UAE and GCC. This document codifies the operating system that powers every client engagement — from first touch to renewal — across a single Zoho-based technology stack.

System Purpose

The MICS Zoho ecosystem unifies Sales, Execution, Finance, HR, Marketing and Admin into a single source of truth. It replaces a previously fragmented process where departments used separate tools and shared logins obscured individual accountability.

> **◉ CORE OPERATING PRINCIPLE**
>
> Every record, every action, every notification carries a traceable **Employee Code**. Shared logins are permitted for cost reasons, but every submitted record captures which individual staff member performed the action, enabling full personal accountability within a shared infrastructure.

Scope of This Document

This Workflow Documentation is paired with a companion Visual Design Guide (MICS-VDG-V4). Together they describe *what* the system does (this document) and *what* it looks like (design guide).

DOMAIN	ZOHO PRODUCT	PRIMARY RESPONSIBILITY
Lead → Deal	Zoho CRM	Lead capture, qualification, deal management, proposal generation, e-signature
Billing	Zoho Books	Invoicing, payment collection, credit notes, referral commissions
Delivery	Zoho Projects / CRM Custom Module	Work Orders, tasks, service-frequency scheduling, client credentials vault
People & Time	Zoho People	Employee records, attendance, leave, onboarding, performance review
Marketing	Zoho Marketing Plus	Campaigns, email nurture, social, attribution and ROI
Documents	Zoho Sign + WorkDrive	Engagement letters, signed contracts, drive auto-organization
Automation	Zoho Flow	Cross-app triggers, 50+ automation rules, escalations
Analytics	Zoho Analytics	Revenue attribution, retention, cross-entity reporting
Messaging	Cliq · WhatsApp Biz · SalesIQ	Internal chat, inbound lead WhatsApp, website live chat

Document Conventions

- **Rule boxes (navy)** mark non-negotiable business rules that drive automation logic.

Seven Unbreakable Rules

These rules are enforced by Zoho Flow automations and cannot be bypassed by any user role, including Partners. They ensure data integrity, accountability and client experience consistency.

RULE 01 · EMPLOYEE CODE ATTRIBUTION

Every lead, contact, deal, invoice, work order, document and task records the Employee Code of the person who created or last modified it. Shared logins do not bypass this — the code is entered at record creation.

RULE 02 · MANDATORY PAYMENT GATE

No Work Order is created and no execution can begin until the agreed deposit (typically 50%) is received and reconciled in Zoho Books. The gate is enforced automatically.

RULE 03 · OWNERSHIP IS SET AT CREATION

Manually created leads, contacts and accounts are owned by the person who created them. Web/chat inquiries are assigned via round-robin OR to the first responder. Ownership transfers require a logged reason.

RULE 04 · LEAD SOURCE OWNER IS PERMANENT

The person or source that brought a lead to MICS is permanently recorded and never changes — even if the lead owner changes. This preserves attribution for marketing ROI and referral tracking.

RULE 05 · HANDLER HISTORY IS APPEND-ONLY

Every owner change is recorded as a new Handler History entry with timestamp and reason. No entry can be deleted or edited — only new entries added.

RULE 06 · EXECUTION SEES EVERYTHING

Once assigned, the execution team has FULL visibility into their client's data: signed contract, fees, portal credentials (FTA, DED, MOF, GDRFA, ICP), service history, BD owner and payment status.

RULE 07 · EVERY ACTION IS AUDITED

All record views, edits, exports, shares and password reveals are written to an immutable audit log, keyed by Employee Code, timestamp and record ID. Retained for 7 years.

Key Metrics The System Tracks

1 · EXECUTIVE SUMMARY

TOTAL HEADCOUNT	ACTIVE DEALS	WORK ORDERS	YTD REVENUE

Organizational Structure

MICS International operates a 7-tier governance model that balances clear escalation paths with flat day-to-day collaboration. The model is enforced through Zoho role hierarchy and data visibility rules.

The Seven Tiers (Names Redacted for Privacy)

TIER	ROLE	HEADCOUNT	RESPONSIBILITY
T1	**Founder**	1	Firm ownership, strategic direction, capital decisions, partnership agreements, final escalation point for any dispute.
T2	**Partners (×3) + Associate Partner (×1)**	4	P&L ownership of core business lines. Client relationship governance for strategic accounts. Cross-functional alignment. Associate Partner operates as partner-delegate authority on operations.
T3	**Department Heads**	4	Head of Business Development · Head of Communications · HR & Admin Manager · Head of Accounts. Each owns a department's results and reports to Partners.
T4	**Managers**	3	Team leads within departments, client portfolio owners, approval authority up to defined thresholds. Report to relevant Department Head.
T5	**Executions & Sales**	~23	Delivery and revenue-facing team: Senior Accountants, Associates (Tax, Advisory, Transfer Pricing, Audit), Analysts (Financial, Investment, Banking, Operations, Corporate Finance), Operations Executives across UAE, India and Remote.
T6	**Support**	~7	Accountants, Accounts Officers, HR Coordinator, HR & Admin support, Executive Assistant — cross-functional support to all tiers.
T7	**Interns**	~4	Structured internship programme across Tax, Advisory, Audit and Operations. Typical tenure 3–12 months with defined learning objectives.

Total directory-listed staff: 46. Individual names redacted from this document for data-protection; names remain in the live Zoho People directory controlled by HR.

Universal Sales Rule

◉ EVERYONE CAN SELL

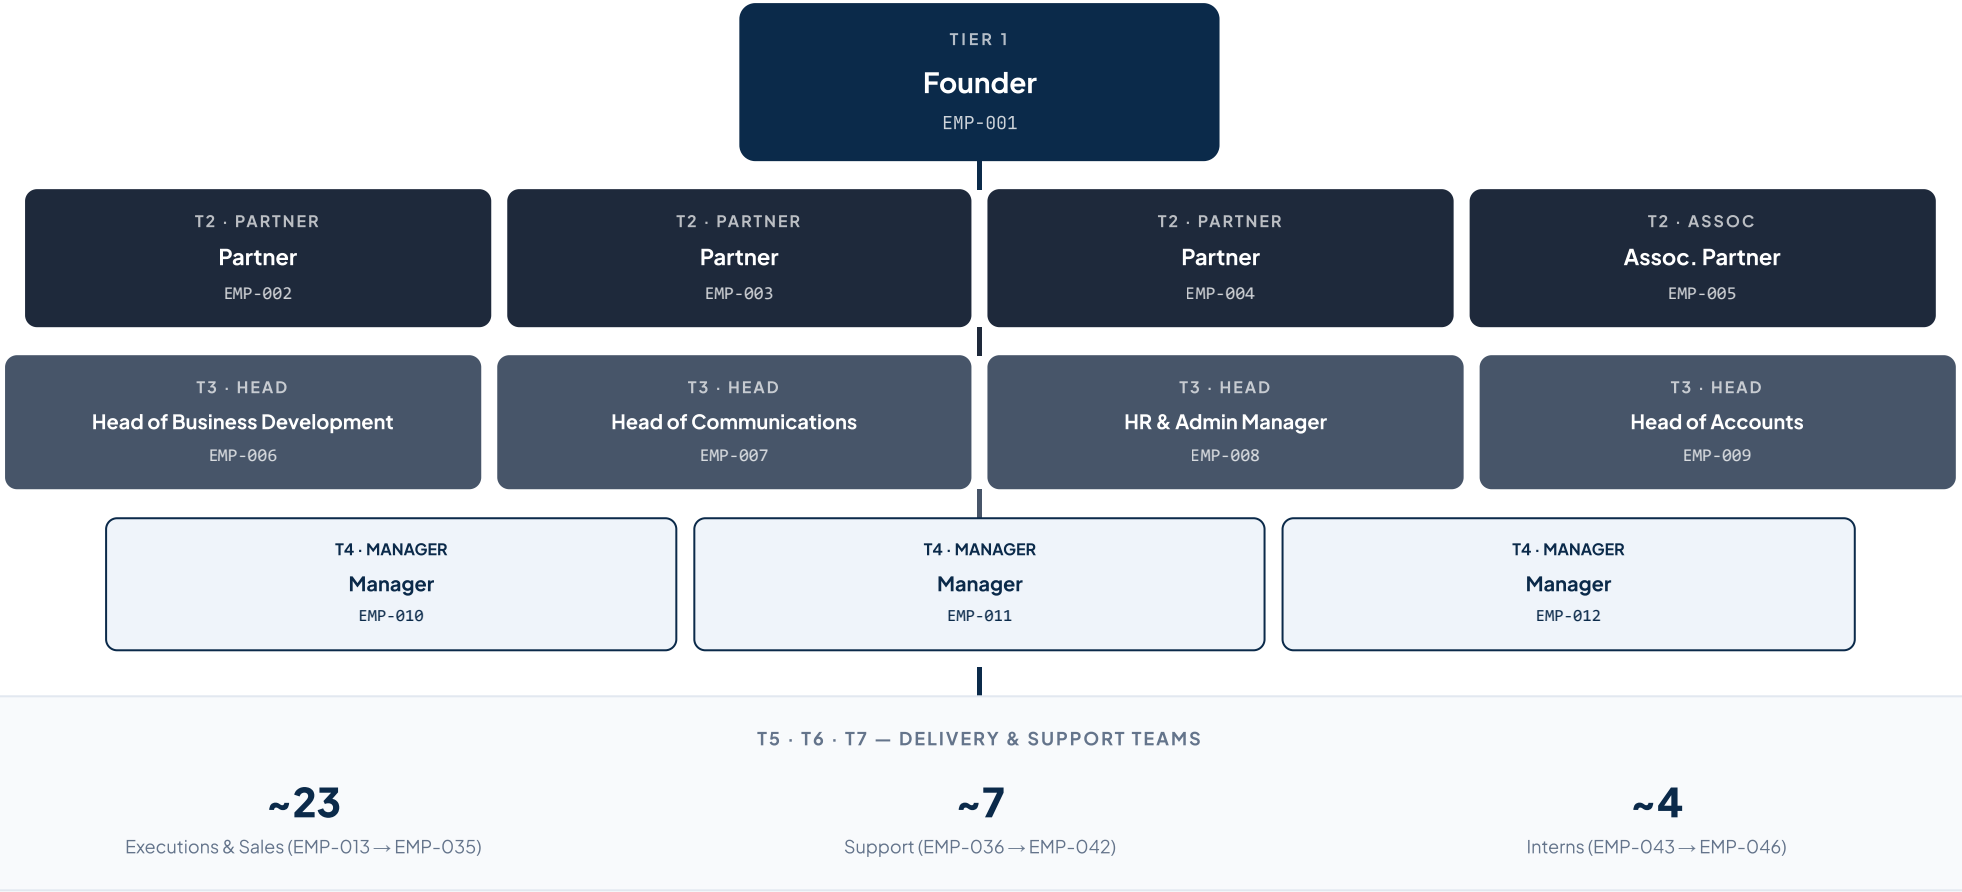
Any employee at T2–T5 with a quota can originate a deal across any MICS service line. BD staff are not siloed into single departments. The service fulfillment happens in the appropriate execution team, but the origination credit (and revenue attribution) goes to whoever brought the deal in.

Multi-Role Support

A single employee may hold multiple simultaneous roles. For example, a Partner (T2) may also act as Head of Accounting (T4) — the system grants the union of permissions for all assigned roles, but the Employee Code remains constant.

Reporting Hierarchy Diagram

Visual reporting structure showing the chain of escalation. Operational collaboration happens horizontally across tiers — this diagram governs formal approval and escalation only. Personal names are redacted and replaced with Employee Codes only.



T5 · T6 · T7 — DELIVERY & SUPPORT TEAMS

~23	~7	~4
Executions & Sales (EMP-013 → EMP-035)	Support (EMP-036 → EMP-042)	Interns (EMP-043 → EMP-046)

Role Responsibilities & Approval Authority

Approval authority is tier-based. Every deal, invoice, discount, refund, new hire and policy change requires sign-off from the appropriate tier. The system enforces this through Zoho approval workflows.

Deal Approval Matrix

DEAL SIZE	BD LEAD (T5/T6)	DEPARTMENT HEAD (T4)	PARTNER (T2)	OWNER (T1)
Up to AED 50,000	✓ Approve	Notify only	—	—
AED 50K — 150K	Submit	✓ Approve	Notify only	—
AED 150K — 500K	Submit	Review	✓ Approve	Notify only
Above AED 500K	Submit	Review	Review	✓ Approve

Discount Approval Matrix

DISCOUNT %	AUTHORITY REQUIRED	JUSTIFICATION REQUIRED
Up to 5%	BD Lead	None
5% — 10%	Department Head	Competitive rationale
10% — 20%	Partner	Strategic rationale + LTV projection
Above 20%	Owner / CEO	Board-level justification

HR & People Authority

ACTION	APPROVER
Leave up to 5 days	Line Manager (T5)
Leave 6-15 days	Department Head (T4)
Leave 16-30 days	Associate Partner (T3) + HR Head
New hire — T6/T7	Department Head + HR Head
New hire — T4/T5	Partner + Owner

Employee Code System

The Employee Code is the primary key identifying every individual staff member across every Zoho app. It is the mechanism that allows shared departmental logins while preserving per-individual accountability.

Code Format

◉ FORMAT: `EMP-NNN`

Employee codes are 3-digit sequential numbers prefixed with `EMP-`. Examples: `EMP-001` (Founder), `EMP-002`, `EMP-003`, `EMP-004` (Partners), `EMP-005` (Associate Partner), `EMP-046` (most recent hire). Codes are never recycled — once assigned they persist even after termination, to preserve historical attribution.

Why Shared Logins?

MICS operates on a licensed Zoho model where per-user pricing is a material cost factor. Rather than purchase 46 individual Zoho seats, the organization uses 9 shared departmental logins that map to the mics.ae email architecture. The Employee Code field then attributes every action to a specific person within that shared session.

SHARED LOGIN GROUP	USERNAME	EMPLOYEE CODE RANGE	COUNT
Partners & Heads	`partners@mics.ae`	EMP-001 → EMP-009 (Founder, Partners, Associate Partner & Heads)	9
Managers	`managers@mics.ae`	EMP-010 → EMP-012 (Manager tier)	3
Tax & Advisory	`tax@mics.ae`	EMP-013 → EMP-019 (Tax & Advisory delivery)	~7
Accounts & Finance	`accounts@mics.ae`	EMP-020 → EMP-026 (Senior Accountants, Analysts)	~7
Audit	`audit@mics.ae`	EMP-027 → EMP-028 (Audit Associates)	2
Operations	`ops@mics.ae`	EMP-029 → EMP-035 (Operations Executives)	~7
Support	`support@mics.ae`	EMP-036 → EMP-042 (Admin, Accounts Officers)	~7
HR & Admin	`hr@mics.ae`	Assigned HR Heads & Coordinators	cross-tier
Interns	`interns@mics.ae`	EMP-043 → EMP-046 (structured programme)	~4

The Login Flow

STEP 1	STEP 2	STEP 3	STEP 4	STEP 5
Pick Session	Enter Code	Verify PIN	Session Active	Audit Log

Employee Directory · 52 Staff

The master roster of all MICS positions — 46 active staff across Dubai (UAE), Ahmedabad (India) and multiple remote locations. Names are redacted from this document for data-protection. Names remain in the live Zoho People directory, which is access-controlled by HR.

CODE	TIER	ROLE	DEPARTMENT	LOCATION
EMP-001	T1	**Founder**	Management	UAE · Dubai
EMP-002	T2	**Partner**	Management	UAE · Dubai
EMP-003	T2	**Partner**	Management	UAE · Dubai

Lead Management · Sources & Capture

A lead is any individual or company that has shown interest in a MICS service but has not yet been qualified. Leads enter the system through nine defined channels, each with its own capture rules, SLA and ownership assignment logic.

The Nine Lead Sources

#	SOURCE	ENTRY METHOD	OWNERSHIP ASSIGNMENT	SLA	NOTES
1	**Website Form**	Zoho Forms embed	Round-robin (BD team)	1 hour	Highest volume source; auto-enriches from Clearbit API
2	**WhatsApp Business**	Cloud API webhook	First responder	30 minutes	Inbound messages create leads automatically; transcript attached
3	**Phone / Inbound Call**	Reception → Manual entry	Caller's handler	2 hours	Reception logs; call recording linked via 3CX
4	**Email Inquiry**	hello@micsinternational.com	Round-robin	4 hours	Zoho Mail → CRM integration creates leads
5	**LinkedIn Outreach**	Manual entry by BD	BD who made contact	—	Outbound origination; LinkedIn URL stored
6	**Referral (External)**	Manual entry + source tag	BD who receives referral	2 hours	External referrer tracked for commission (see §12)
7	**Referral (Existing Client)**	Existing client submits	Account owner	4 hours	Tracked for retention; no commission but grateful outreach
8	**Event / Conference**	Badge scan / manual	Event representative	24 hours	Batch upload post-event; tagged with event name
9	**SalesIQ Live Chat**	Website chat widget	Chat handler	Real-time	Converts to lead when visitor shares email/phone

Lead Capture Required Fields

MANDATORY

- **Full Name** (or Company Name if corporate)
- **Primary Contact** (email OR phone)
- **Lead Source** (dropdown, 9 options)
- **Service Interest** (multi-select)
- **Created By** (auto-populated Employee Code)

RECOMMENDED

- Company Name + Trade License
- Industry & Employee Count
- Financial Year End
- Estimated Budget / Deal Value
- Timeline / Urgency

Lead Status Workflow

Every lead progresses through eight defined statuses from first capture to final disposition. The status dictates SLA, notification cadence and who sees the lead in their work queue.

01 · NEW	02 · ASSIGNED	03 · CONTACTED	04 · QUALIFYING
Unassigned	**Owner Notified**	**First Touch Done**	**Discovery**
Just captured, awaiting owner assignment	Routed to handler per source rules	Owner has initiated call/email	BANT assessment in progress

05 · QUALIFIED	06 · PROPOSAL	07 · CONVERTED	08 · LOST
Hot Lead	**EL Sent**	**Deal Created**	**Disqualified**
BANT ≥ 60, ready for proposal	Engagement letter dispatched	Lead → Account + Deal	No fit / no budget / non-responsive

Lead Scoring (0–100 Points)

CRITERION	MAX POINTS	SCORING LOGIC
Budget Confirmed	25	Explicitly stated AED figure = 25 · "flexible" = 15 · unknown = 0
Authority / Decision Maker	20	C-level contact = 20 · Manager = 12 · Influencer = 6 · Unknown = 0
Need Clarity	20	Specific service + pain point = 20 · general interest = 10 · vague = 5
Timeline	15	<30d = 15 · 30–90d = 10 · 90–180d = 5 · >180d = 0
Engagement	10	Multiple touches / opens = 10 · single touch = 5 · no response = 0
ICP Fit	10	Perfect industry / size / geo match = 10 · partial = 5 · poor = 0

Score-Based SLA

SCORE	CATEGORY	FIRST TOUCH	FOLLOW-UP CADENCE	NOTIFICATION
80 — 100	🔥 Hot	1 hour	Every 24 hours	Owner + Manager SMS + Cliq ping
50 — 79	Warm	4 hours	Every 48 hours	Owner email + Cliq
25 — 49	Cold	24 hours	Weekly	Owner email

Lead Ownership & Attribution Fields

Every lead carries five distinct ownership-related fields. Keeping these separate (rather than collapsing them into a single "owner" field) allows MICS to track attribution across multi-touch, multi-person client journeys.

FIELD	MUTABLE?	SET AT	PURPOSE
Lead Owner	Yes	Record creation or reassignment	Current person responsible for the lead's progression. Sees it in their queue. Can change via reassignment flow.
Lead Source Owner	Permanent	Record creation (auto)	Who brought this lead in — a BD rep for outbound, the website for inbound, an external referrer, etc. Never changes. Used for revenue attribution.
Current Handler	Yes	Each interaction	Whoever last took action. Useful when multiple people collaborate on a lead. Auto-updates with each activity.
Handler History	Append-only	Every handler change	Immutable log. Each entry: Employee Code, timestamp, reason. Cannot be deleted or edited.
External Referral Source	Permanent	Record creation (if applicable)	Name of the external party (vendor, partner, individual) that referred this lead. Tied to commission schedule.

WORKED EXAMPLE (ILLUSTRATIVE)

An overseas parent company introduces its UAE free-zone subsidiary (cosmetics trading, RAKEZ) to MICS as an external referral. The prospect fills the website contact form. The round-robin routes the lead to `EMP-010` (Manager). After discovery, the Manager hands off to `EMP-002` (Partner) for the multi-service engagement conversation.

Resulting fields on the Lead record:
Lead Owner = `EMP-002` (Partner, now)
Lead Source Owner = Website Form (permanent)
Current Handler = `EMP-002`
Handler History = [`EMP-010` → `EMP-002` , reason: "Multi-service international client, partner pitch"]
External Referral Source = [Referrer Party Name] (permanent, 5% standard commission)

Ownership Transfer Flow

1. **Current owner initiates transfer** by clicking Reassign on the lead record.
2. **Select new owner** from Employee Code dropdown (scoped to BD + Managers).
3. **Provide reason** (dropdown: Seniority / Specialty / Workload / Out of office / Other + free text).
4. **New owner receives notification** via Cliq + email + CRM alert.
5. **New owner must accept** within 24 hours; if not, escalates to Department Head.
6. **Handler History entry created** automatically, permanent record.

Lead Conversion Wizard

When a Lead reaches "Qualified" status, it can be converted into a full Account + Contact + Deal. This is a 3-step wizard that captures the remaining enrichment data.

Conversion Wizard Steps

STEP 1 · ACCOUNT ENRICHMENT

The Lead's company becomes an Account in CRM. Additional mandatory fields unlocked at this stage:

- Full legal name (as per trade license)
- Trade License Number + Issuing Authority (DED, Free Zone, etc.)
- Financial Year End (e.g. 31 Dec, 31 Mar)
- Industry (dropdown: 22 sectors aligned to UAE NACE codes)
- Employee count band (1–10 / 11–50 / 51–250 / 250+)
- Registered Address + Billing Address
- TRN (Tax Registration Number) if VAT-registered

STEP 2 · CONTACTS

The Lead's primary contact becomes the first Contact on the Account. Additional contacts can be added immediately:

- Primary Contact (from Lead, role: CFO, CEO, Finance Mgr, etc.)
- Secondary Contact(s) — optional at this stage, can be added later
- Accounting Contact (for Books integration — receives invoices)
- Signing Authority (for engagement letters — may differ from primary)

STEP 3 · DEAL CREATION

A Deal record is created representing the opportunity in play:

- Deal Name (auto-suggested: "Account Name · Service · Year")
- Service Package (multi-select from 24 services, each with frequency tag)
- Estimated Value (AED, sum of selected services)
- Expected Close Date
- Pipeline (dropdown: MICS Services · Advisory · Recruitment · KRO Property · MICS Visa)
- Stage (starts at "Qualified" by default, mirrors Lead status)
- BD Owner = Lead Owner (pre-filled, can change)
- Execution Assignment (optional at this point, set when Deal moves to Negotiation)

MICS

Deal Pipelines · Five Distinct Tracks

MICS operates five parallel deal pipelines with different stage definitions, probabilities and SLAs. A deal enters one pipeline based on the service package; cross-pipeline deals are split into separate records.

The Five Pipelines

PIPELINE	AVG DEAL SIZE	AVG CYCLE	WIN RATE	TYPICAL SERVICES
MICS Services	AED 80K	28 days	38%	VAT, Corporate Tax, Audit, Bookkeeping, AML, ESR
Advisory	AED 250K	60 days	28%	Transfer Pricing, Due Diligence, M&A, Restructuring
Recruitment	AED 35K (placement fee)	45 days	55%	Executive search, contingency hiring
KRO Property	AED 180K (commission)	90 days	22%	Real estate transactions (separate entity)
MICS Visa & PRO	AED 18K	14 days	72%	Golden Visa, Employment visas, license renewals

MICS Services Pipeline · Stages

#	STAGE	PROBABILITY	SLA IN STAGE	AUTO ACTIONS ON ENTRY
1	**Qualified**	20%	5 business days	Deal created from lead conversion, BD Owner assigned
2	**Proposal**	40%	7 business days	Engagement letter template loaded, fields merged
3	**Negotiation**	60%	10 business days	Partner notified if > AED 150K, discount approval workflow
4	**Signed**	85%	3 business days	Invoice generated in Books; payment gate activated
5	**Paid**	100%	—	Work Order auto-created, routed to Execution
6	**Delivered**	100%	—	Work Order closed, renewal forecast created
—	**Lost** (terminal)	0%	—	Lost reason recorded; added to nurture campaign

◆ STAGE AGING RULES

A deal that exceeds its stage SLA triggers automated escalation: after 1×SLA a Cliq ping to owner; after 2×SLA an email to manager; after 3×SLA the deal is flagged "Stalled" on dashboards and requires manual review.

Deal Negotiation & Handoff Preparation

The Negotiation stage is where most deals die if they die. Robust process discipline here — clear approval chains, transparent discount rules, documented concessions — is the single largest lever for win-rate improvement at MICS.

Required Fields Before Stage Advance

A deal cannot move from **Proposal** to **Negotiation** until these fields are populated. This is enforced at the CRM layer with field validation:

- **Proposal Code** (auto-generated when engagement letter is dispatched)
- **Signed Date (Expected)** — within 14 days of Proposal stage entry
- **Decision Maker Identified** — Contact record tagged as "Signing Authority"
- **Champion Identified** — at least one internal contact advocating for MICS
- **Competitors Logged** — dropdown of known competing firms (can be "None known")
- **Execution Pre-Assignment** — if the deal is won, who will execute? (Name + Employee Code)

Concession Log

Every concession offered during negotiation is logged on the deal record. This creates a negotiation history that prevents concession creep and enables post-hoc analysis.

DATE	TYPE	VALUE	OFFERED BY	JUSTIFICATION
—	Discount	% or AED	Employee Code	Free-text reason (e.g., "Competitor X quoted 12% less")
—	Scope add	Service name	Employee Code	What additional service was thrown in
—	Payment terms	Days	Employee Code	e.g., "30 days net → 45 days net"
—	Deliverable SLA	Days	Employee Code	Shorter turnaround commitment

◆ **CONCESSION CREEP THRESHOLD**

If cumulative concessions exceed 15% of original deal value, the deal automatically requires re-approval from a Partner (T2) before proceeding to Signed stage — even if each individual concession was within authority limits.

Execution Pre-Assignment

Before a deal is signed, the BD Owner must identify who in Execution will deliver the work. This prevents the "deal won but nobody to deliver" scenario. The Execution pre-assignee:

- Is notified as a "heads-up" — not a firm commitment yet
- Reviews scope and can flag capacity constraints before signing

Won, Lost & Nurture Outcomes

Deal Won — Automated Chain

When a deal moves to "Signed" stage (both parties signed), a cascade of automations fires:

◐ STEP 1
Contract Archived
Signed PDF to Drive · AES-256 encrypted

◐ STEP 2
Invoice Generated
Zoho Books auto-creates invoice per deposit terms

◐ STEP 3
Payment Gate Opens
Awaiting deposit · Execution BLOCKED

◐ STEP 4
Deposit Received
Books reconciles · Gate status → CLEARED

◐ STEP 5
Work Order Created
Auto-routed to pre-assigned Exec Owner

Lost Reasons (Structured Dropdown)

LOST REASON CATEGORY	FREQUENCY (YTD)	SUB-REASONS
Price / Budget	34%	Too expensive, no budget, chose cheaper competitor
Timing	21%	Not now, deferred to next year, internal delays
Competitor	18%	Lost to named competitor (specify), existing relationship
No Decision	12%	Ghosted, prospect stopped responding, champion left
Scope Misfit	8%	MICS cannot deliver this service, out of geography
Internal (MICS)	5%	Capacity issue, proposal quality, BD turnover
Other	2%	Free text required

◉ LOST ≠ DEAD

Every lost deal auto-enrolls in a 12-month nurture sequence (email drip + quarterly BD check-in). Roughly 18% of nurture-enrolled lost deals re-open within 18 months. Do not delete lost deals — they are future pipeline.

Post-Mortem Requirements

Deals lost above AED 150K trigger a mandatory post-mortem within 5 business days. The BD Owner completes a structured form:

- What was the true reason? (beyond the dropdown)
- What would we do differently?
- Is there a pattern (same competitor, same objection)?

Pipeline Velocity & Hygiene Rules

Pipeline hygiene is the discipline of keeping deal records current, accurate and actionable. A messy pipeline produces unreliable forecasts and wastes BD time. MICS enforces hygiene through weekly automated reviews and a public pipeline-health scoreboard.

The Four Hygiene Metrics

METRIC	TARGET	AMBER	RED	AUTO ACTION
Stage Age	< 1× SLA	1–2× SLA	> 2× SLA	Deal flagged "Stalled"
Activity Recency	< 7 days	7–14 days	> 14 days	Owner + Manager Cliq ping
Close Date Accuracy	Future	Past ≤ 14d	Past > 14d	Force update or close-lost
Contact Breadth	≥ 2 contacts	1 contact	0 contacts	Single-thread warning

Weekly Pipeline Review Cadence

Every Monday at 09:00 local time:

1. **Automated report generated** — sent to each BD Owner + Manager with their pipeline health card.
2. **Each BD schedules 30 min self-review** — updates stale deals, closes dead ones, adjusts close dates.
3. **Manager 1:1s** on Tuesday — focus on deals at risk and top 5 close opportunities.
4. **Friday department huddle** — public scoreboard review, celebrate wins, flag patterns.

Deal Removal Criteria

◆ WHEN TO MARK CLOSED-LOST

Deals meeting ANY of these conditions should be closed-lost (not left in pipeline):

- No response to 3+ outreach attempts over 21 days
- Champion has left and no new champion identified within 14 days
- Prospect explicitly said "no" or "not now" (and "not now" > 90 days)
- Close date has slipped 3+ times with no progression
- Deal has been in same stage for 3× the SLA

Forecasting Rules

Proposal & Engagement Letter Workflow

The Engagement Letter is the single most important client-facing document MICS produces. It converts intent into commitment. The proposal system is built around reusable templates with merge fields, ensuring consistency while preserving per-client customization.

Template Library Structure

TEMPLATE	MERGE FIELDS	OWNER	USE CASE
MICS Standard EL Default	28	Director	Multi-service annual compliance packages
Audit & Assurance	32	Audit Partner	Statutory audit engagements (includes independence clauses)
VAT Compliance Package	24	Tax Head	Quarterly VAT filing + advisory
Corporate Tax Onboarding	26	Tax Head	New corporate tax registration + first filing
Advisory Scope	18	Advisory Head	Project-based work (M&A, TP, DD)
Business Setup	22	PRO Manager	Company formation + PRO services
Visa & Golden Visa	16	PRO Manager	Immigration-focused engagements
Recruitment Services	14	HR Head	External search / staffing engagements

Merge Field Categories

DEAL FIELDS

- `{{deal.name}}` — Deal title
- `{{deal.amount}}` — Total value (AED)
- `{{deal.close_date}}` — Expected start
- `{{deal.proposal_ref}}` — EL reference code
- `{{deal.valid_until}}` — Proposal expiry date

ACCOUNT FIELDS

- `{{account.name}}` — Legal entity name
- `{{account.license}}` — Trade License number
- `{{account.address}}` — Registered address

CONTACT FIELDS

- `{{contact.full_name}}` — Primary contact
- `{{contact.title}}` — Job title
- `{{contact.email}}` — Email address
- `{{signing.full_name}}` — Signing authority

SERVICE FIELDS

- `{{services.table}}` — Full scope table
- `{{services.total}}` — Pre-VAT subtotal
- `{{services.vat}}` — 5% VAT amount
- `{{services.grand_total}}` — Total fee

Proposal Approval & E-Signature

Internal Approval Chain

Before a proposal is sent to a client, it passes through an internal approval chain. The chain depth depends on deal size (see §2 approval matrix). A typical chain:

1. **BD Owner Draft** — BD creates proposal from template, populates merge fields, reviews rendered output.
2. **Self Check** — 7-point checklist: scope clarity, pricing accuracy, typos, logo, merge fields rendered, attachments, signatory names.
3. **Manager Review** — BD Manager reviews in Zoho (inline comments). Can approve, request changes, or reject.
4. **Department Head** (if > 50K) — Reviews scope fit with delivery capacity.
5. **Partner Sign-off** (if > 150K) — Strategic review; may push back on pricing.
6. **Owner Approval** (if > 500K) — Final authority for major deals.
7. **Released to Client** — Once approval chain is complete, BD Owner dispatches via Zoho Sign.

Dual Signature Path

Clients may sign via online Zoho Sign or via offline print-sign-scan-upload. Both paths converge to the same end state.

PATH A · ONLINE (PREFERRED)

Dispatch via Zoho Sign · Client signs digitally · MICS countersigns · Auto-archived · Average turnaround **2.4 hours** · 82% of engagements use this path.

PATH B · OFFLINE UPLOAD

Client prefers paper · BD downloads PDF · Sends to client via email · Client prints-signs-scans-returns · BD uploads signed copy · System attributes & archives · Used for 18% of engagements, typical for older government-facing clients.

Signing Order (Online Path)

1. **Client signs first** — Commitment before MICS commits.
2. **MICS countersigns** — Typically the Director or Partner for the relevant practice.
3. **Fully-executed copy distributed** — To client email + stored in Drive under *Clients › [Account Name] › Signed*.

Proposal Expiry

Every proposal has a validity window (default 30 days, minimum 7, maximum 90). Upon expiry:

- Zoho Sign envelope auto-voids
- Deal stage reverts to "Negotiation" (from "Proposal")
- BD Owner receives alert 7 days before expiry, 1 day before expiry, and on expiry
- If prices have changed, a new proposal must be issued (not extended)

Payment Gate · The Unbreakable Rule

◉ THE PAYMENT GATE RULE

No Work Order is created, and no service delivery begins, until the agreed deposit is received and reconciled in Zoho Books. This rule is enforced by Zoho Flow automation. It cannot be overridden by any user, including Partners or the CEO — it requires a formal policy exception recorded by the CFO and Owner.

Why This Rule Exists

- **Protects cash flow** — prevents delivery of weeks of work against unpaid invoices.
- **Tests client seriousness** — a client who won't pay a deposit is unlikely to pay the balance.
- **Eliminates ambiguity** — execution team never has to ask "has this been paid?"
- **Protects MICS reputation** — delivering then chasing payment damages the relationship.

Gate Rules By Deal Tier

DEAL SIZE	DEPOSIT REQUIRED	MILESTONES	FINAL PAYMENT DUE
Up to AED 25K	100%	Single payment	Before WO creation
AED 25K — 100K	50%	50 / 50	On milestone or delivery
AED 100K — 300K	40%	40 / 30 / 30	Per defined milestones in EL
Above AED 300K	30%	Custom (3–5 stages)	Structured per engagement
Government / Enterprise	By contract	As per contract	May extend to 60–90 days post-invoice

Gate States

STATE	BADGE	MEANING
AWAITING	Pending	Invoice issued, deposit not yet received. Execution blocked.
PARTIAL	Partial	Partial payment received. If below threshold, still blocked.
CLEARED	Cleared	Required threshold met. Work Order auto-created.
OVERDUE	Overdue	Deposit not received by due date. Escalates to BD + Finance.

Invoice & Collection Workflow

Invoice Lifecycle

01	02	03	04	05	06
Generated	**Sent**	**Viewed**	**Paid**	**Receipted**	**Closed**
Auto from Deal Won	Emailed to Accounting Contact	Tracking pixel / portal view logged	Bank reconciliation matches invoice	Receipt issued to client	Books entry finalized

Overdue Escalation Ladder

DAYS OVERDUE	ACTION	ACTOR	TONE
+1 day	Polite reminder email	Automated (Books)	Friendly: "Invoice due yesterday — please confirm payment status"
+7 days	Follow-up call	BD Owner	Relationship: "Checking in, is there anything blocking payment?"
+14 days	Formal reminder letter	Finance Manager	Firm: Reference contract terms, highlight late fee clause
+21 days	Service suspension warning	Dept Head + CFO	Serious: "Services will be suspended if unpaid within 7 days"
+30 days	Service suspension	Execution Owner	Action: Pause all deliverables; notify client
+45 days	Legal review	Partner + Legal	Escalate to demand letter / collections

Credit Notes & Refunds

Credit notes (reducing an invoice) and refunds (returning received cash) require elevated approval:

- **Credit Note up to 10% of invoice** — Finance Manager + BD Owner
- **Credit Note 10–25%** — + Department Head
- **Credit Note > 25% or any refund** — + Partner sign-off
- **All credit notes** — reason logged in structured dropdown (scope reduction / quality issue / relationship gesture / billing error / other)

◉ COLLECTION KPI

Target collection rate is **95% within 30 days of invoice date**. YTD collection rate is 88% — a known gap owned by the Finance Manager. Monthly AR aging report is reviewed by CFO and Partners.

Sales-to-Execution Handoff

Handoff quality is the single biggest predictor of first-month client satisfaction. A sloppy handoff — missing credentials, unclear scope, no BD context — leads to re-work, re-meetings and a shaky start to the relationship.

The Six-Item Handoff Checklist

Before a Work Order is released to Execution, the BD Owner must confirm six artifacts are in place:

#	ARTIFACT	MUST INCLUDE
1	**Signed Engagement Letter**	Both parties signed · Full PDF attached · Scope section intact
2	**Payment Confirmation**	Deposit invoice paid · Receipt attached · Gate state = CLEARED
3	**Client Contacts**	Primary, Accounting, Signing and Operational contacts — names, roles, emails, phones
4	**Service Scope Summary**	Services list with frequency tags · SLAs · Any custom terms from EL annexures
5	**Client Portal Credentials**	FTA, DED, MOF, GDRFA, ICP, Banking (as applicable) — logged in Credentials Vault
6	**Special Instructions**	BD's notes on client preferences, sensitivities, commitments made, stakeholders to avoid/prioritize

Handoff Meeting

For engagements above AED 100K, a synchronous handoff meeting is scheduled:

- **Attendees**: BD Owner, Execution Owner, Department Head (if > 200K)
- **Duration**: 30 minutes
- **Agenda**: Walk through the 6-item checklist · Client background · Risks · Timeline · Q&A
- **Recorded**: via Zoho Meeting; recording attached to Work Order
- **Output**: Execution formally accepts ownership; Work Order status changes from "Pending Handoff" to "Active"

Rejection Rights

◆ EXECUTION CAN REJECT A HANDOFF

If any of the 6 items is missing or inadequate, the Execution Owner can reject the handoff within 48 hours. The Work Order remains in "Pending Handoff" and the BD Owner must remediate. This is not punitive — it is a quality control loop that prevents downstream failure.

Work Order Structure

The Work Order is the master delivery record. One deal produces one Work Order, which contains all services, tasks, credentials, communication and documents for the engagement.

Work Order Anatomy

SECTION	SOURCE	CONTENTS
Client Info Block	Auto from Account	Legal name · Trade license · Financial YE · Primary contact · Phone · Email · Industry
Sales Info Block	Auto from Deal	BD Owner (Code) · Deal ref · Proposal ref · Signed date · Contract value · External referral
Payment Info Block	Auto from Books	Invoice number · Invoiced · Paid · Outstanding · Gate status · Next milestone
Execution Info Block	Assignment	Exec Owner (Code) · Department · Start date · Deadline · % complete · SLA status
Service Line Items	From Deal scope	Each service with frequency tag, next due, SLA days, assigned Employee Code, status, progress
Tasks Tab	Execution creates	Checklist of deliverables · Owner · Deadline · Status · Blockers
Documents Tab	Mixed	Signed EL · Client-provided docs · Deliverables · Drafts · Reports
Communication Tab	Integrated	Email thread · WhatsApp thread · Meeting notes · Cliq discussion
Credentials Tab	Vault	Portal logins — FTA, DED, MOF, GDRFA, ICP, Banking, Insurance
Service Schedule Tab	Auto-computed	Calendar of quarterly / yearly recurring deadlines with auto-reminders

Work Order Statuses

STATUS	MEANING
Pending Handoff	Created, awaiting Execution Owner acceptance
Active	Accepted; in progress
At Risk	Behind schedule or blocker flagged; needs attention
Overdue	Deadline missed; escalated
On Hold	Paused by client request or payment issue

SLA Tracking & Escalation Ladders

Service SLA Library

SERVICE	SLA	FROM	MEASUREMENT
VAT Filing (Quarterly)	5 business days	Data receipt	Submission on FTA portal
Corporate Tax Filing	15 business days	Financial year close	Submission on MOF portal
Statutory Audit	30 business days	Audit kickoff	Signed audit report
Trade License Renewal	10 business days	Renewal window open	Renewed license issued
Business Setup	10 business days	All docs received	License issuance
Golden Visa Processing	21 business days	Application submission	Visa stamping
AML Return	7 business days	Data receipt	Regulatory submission
ESR Notification	5 business days	Reporting period open	Submission to MOF
Monthly Bookkeeping	By 10th of next month	Month close	Delivered P&L + BS
Ad-hoc Advisory	48 hours	Query receipt	Written response

Escalation Ladder (D+1 / D+3 / D+7)

TRIGGER	ACTION	ACTOR	CHANNEL
SLA Missed Day 1	Notify Exec Owner	System auto	Cliq + email
Day 3 Overdue	Escalate to Manager	System auto	Cliq + email + SMS
Day 7 Overdue	Escalate to Department Head + BD Owner	System auto	Cliq + email + meeting request
Day 14 Overdue	Escalate to Partner · client-facing call	Dept Head	Direct partner involvement
Day 21 Overdue	Executive intervention + remediation plan	Partner + CEO	Formal client call + credit consideration

◉ SLA CREDIT POLICY

Service Frequency Classification

Every service offered by MICS is tagged with a frequency type. This classification drives reminder schedules, capacity planning and renewal forecasting.

The Four Frequency Types

FREQUENCY	BADGE	TRIGGER	REPRESENTATIVE SERVICES
One-Time	ONE-TIME	Client request	Business Setup · Golden Visa · Trademark Reg · Due Diligence · M&A · Bank Account Opening · Liquidation
Monthly	MONTHLY	Month end	Bookkeeping · Payroll Processing · Management Reporting
Quarterly	QUARTERLY	Quarter end	VAT Filing · AML Quarterly Return · Board Reporting · Financial Statements Review
Yearly	YEARLY	Financial year event	Statutory Audit · Corporate Tax Filing · Trade License Renewal · ESR Notification · Annual Board Meeting · Budget

Reminder Schedule By Frequency

FREQUENCY	REMINDER SCHEDULE (DAYS BEFORE DUE DATE)
One-Time	T-14, T-7, T-3, T-1, T-0 (due day), T+1 (overdue alert)
Monthly	T-5, T-2, T-0, T+1 (overdue)
Quarterly	T-30, T-14, T-7, T-3, T-0, T+1
Yearly	T-60, T-30, T-14, T-7, T-3, T-0, T+1

Capacity Planning Impact

Each service is also tagged with an estimated hours-per-instance. The combination of frequency × instances × hours gives the annual capacity load per Execution staff member. This drives:

- **Hiring decisions** — Are we over or under capacity for Q3 VAT season?
- **Intake velocity** — Can we take on more clients for Corporate Tax this year?
- **Cross-training** — Can an Audit associate take on Tax work in peak season?

Renewal Calendar & Forecasting

Renewals are the most profitable revenue MICS earns — low CAC, high LTV. A missed renewal is a client that either leaves or gets re-sold through effort. The system treats every recurring service instance as a forecasted renewal opportunity.

Renewal Lifecycle

T-120	T-90	T-60	T-30	T-0
Forecast	**Review**	**Outreach**	**Proposal**	**Renewed**
Renewal deal auto-created in pipeline	Account manager reviews health score	Renewal conversation scheduled	Renewal EL sent · Price adjustment	Signed · Payment · Work Order refresh

Renewal Forecasting Table

Each quarter, the system produces a renewal forecast by department:

QUARTER	CLIENTS UP FOR RENEWAL	AED FORECAST	RETENTION TARGET	OWNER
Q2 2026	18 clients	AED 2.4M	88%	Dept Heads
Q3 2026	24 clients	AED 3.1M	88%	Dept Heads
Q4 2026	12 clients	AED 1.6M	88%	Dept Heads
Q1 2027	29 clients *(peak)*	AED 4.2M	88%	Dept Heads

Price Adjustment Rules

- **Standard annual uplift**: 5% (tied to inflation + service cost growth)
- **Premium client lock**: Clients > AED 500K annual spend can lock 2-year pricing for a 3% discount
- **Scope expansion**: New services added at renewal use current rate card, not legacy pricing
- **Declining client discount**: If a renewal pushback threatens loss, up to 10% discount is authorized at Manager tier; 10-20% requires Partner

◉ CHURN DEFINITION

A client is officially "churned" when 180 days pass after an expected renewal date without a signed renewal or active negotiation. Churned clients move to the Lost bucket and enter a 12-month nurture sequence for potential win-back.

Sales Targets By Role

MICS operates a **universal accountability** model. Every role except pure Execution and pure Support has a measurable target. Targets are calibrated to role scope — a BD rep has individual revenue; a department head has team revenue plus personal revenue.

Target Matrix

ROLE	TARGET TYPE	TYPICAL FY TARGET	FREQUENCY
BD Executive (T6)	Personal revenue	AED 600K	Annual · quarterly breakdown
BD Manager (T5)	Personal + small team	AED 800K personal · AED 1.2M team	Annual · quarterly
Department Head (T4)	Team + personal	AED 2.5M team · AED 500K personal	Annual
Partner (T2)	P&L line	Business-line specific (AED 8M+)	Annual
Owner (T1)	Company revenue	AED 18M+ (scales yearly)	Annual · Board level
HR Head	Placements + retention	20 placements · 92% retention	Annual · quarterly
Finance Manager	Collection rate + close days	95% < 30d · 5-day close	Monthly
Operations Manager	SLA + CSAT	95% SLA · CSAT ≥ 4.5	Quarterly
Admin Staff	Operational KPIs	24h response · 48h processing	Weekly average
Execution / Delivery (T6)	No sales target	Delivery KPIs: 95% SLA · 90% on-time · CSAT ≥ 4.2	Per engagement
Support / Interns (T7)	No sales target	Task completion KPIs	Weekly

Target-Setting Process

1. **November** — Owner sets company-level revenue target for following FY.
2. **December** — Partners break down company target by business line.
3. **Early January** — Department Heads set team targets; individual targets discussed in 1:1s.
4. **Mid January** — Individual targets signed off; IDPs (Individual Development Plans) written.
5. **Monthly** — Managers review attainment in 1:1; flag under-performers early.
6. **Quarterly** — Department-level reviews with Partners; targets can be adjusted with justification.

Performance Visibility Rules

Who can see whose numbers? MICS operates a balanced visibility model — private enough to avoid internal competition stress, public enough to drive accountability.

Self-Visibility (Every Employee Sees Their Own)

- **YTD revenue originated** — personal number, updated live
- **Pipeline value** — weighted and unweighted
- **Close rate** — personal win percentage, 12-month rolling
- **Activity score** — calls, meetings, emails logged
- **Client retention** — % of owned clients retained in last 12 months
- **CSAT / NPS** — feedback from clients they own
- **Attendance & leave balance** — personal record
- **Training progress** — assigned courses, completion %

Team Visibility

VIEWER ROLE	CAN SEE
Manager (T5)	All direct reports' individual metrics · team aggregate
Department Head (T4)	All managers + all individuals in department · cross-team comparison
Associate Partner (T3)	All departments under their scope · operations aggregate
Partner (T2)	Full company performance · any individual (business need basis)
Owner (T1)	Everything
HR Head	All employee records (HR-relevant) · anonymized revenue rollups

Public Scoreboards

Certain metrics are publicly visible to all employees — the goal is transparency and friendly competition, not shame:

- **Weekly Top Deals Won** — shows name + deal size (no personal pipeline)
- **Monthly CSAT Champions** — Execution staff with highest client feedback
- **Quarterly Revenue Leaderboard** — BD team rankings (opt-in display of name)
- **Attendance Recognition** — perfect-attendance quarterly shout-outs

Client Ownership Rules · Deep Dive

◉ RULE 1 · CREATOR BECOMES OWNER

Every manually created lead, contact or account inherits the creator's Employee Code as its owner. This is the default, and it prevents "orphan" records with no accountability.

◉ RULE 2 · WEB & CHAT INQUIRIES ARE EXCEPTIONS

Inbound inquiries via website form, chat widget, WhatsApp or hello@ email do NOT have a pre-existing owner. They are routed via two mechanisms: **round-robin** (default, distributes fairly) or **first responder** (whoever picks it up first owns it).

◉ RULE 3 · OWNERSHIP = SALES RELATIONSHIP

The Owner is responsible for the client relationship — first point of contact for escalations, upsell opportunities, retention conversations. The Execution team delivers the service but does NOT own the relationship.

◉ RULE 4 · OWNERSHIP TRANSFERS ARE LOGGED

Changing an owner requires a dropdown reason + free text. The transfer creates an append-only Handler History entry. Previous owners remain in history permanently.

◉ RULE 5 · EXECUTION NEVER OWNS CLIENTS

A Senior Tax Associate delivering VAT returns for 40 clients does not own any of them. The BD Owner / Account Manager retains the sales relationship. This allows execution specialists to focus on delivery quality without feeling obligated to upsell.

◉ RULE 6 · SOURCE OWNER IS PERMANENT ATTRIBUTION

The Lead Source Owner never changes. It tracks WHERE the lead came from (a BD rep's outbound effort, the marketing website, an event, an external referrer). This preserves attribution accuracy for both revenue crediting and marketing ROI calculation.

◉ RULE 7 · EXTERNAL REFERRAL SOURCE IS PERMANENT

If the lead came via an external third party (partner firm, freelance referrer, employee of another company), that referrer is recorded permanently. This powers the external commission tracking (§12).

Ownership Transfer Scenarios

SCENARIO	TYPICAL REASON	APPROVER
BD rep leaves MICS	Portfolio reassignment to another BD	Dept Head

Client Health Score & Retention Lifecycle

Every active client carries a Health Score (0–100). The score aggregates five weighted components and drives proactive retention outreach.

Health Score Formula

COMPONENT	WEIGHT	CALCULATION
Payment Behavior	25%	% of invoices paid within terms over last 12 months (100 = always on time, 0 = multiple late)
Service Delivery Quality	25%	% of SLAs met on this client's engagements (Execution-side input)
Engagement Breadth	20%	Number of active services (1 service = 40 · 2 = 60 · 3+ = 100)
CSAT & Feedback	15%	Average CSAT from post-delivery surveys (normalized to 0–100)
Communication Frequency	15%	Meaningful touches / month (0 = orphan, 2+ = healthy)

Retention Lifecycle Stages

STAGE	HEALTH SCORE	REQUIRED ACTION	ACTOR
New	—	First 90 days: weekly check-ins	BD Owner + Exec Owner
Active	80+	Quarterly business review	Account Manager
At Risk	50–79	Recovery plan within 14 days	Account Manager + Dept Head
Critical	Below 50	Partner intervention · remediation	Partner
Churned	—	Nurture enrollment · post-mortem	Marketing + former Owner
Returned	Reset	"Welcome back" warmth · care plan	New Account Manager + Partner

◉ QUARTERLY RETENTION REVIEW

Every quarter the Account Manager reviews all clients with Health Score < 80. A written recovery plan is drafted, reviewed by the Dept Head and executed. Progress is measured at the following quarter review.

External Referral & Commission Tracking

◆ IMPORTANT DISTINCTION

Commission tracking at MICS is for **EXTERNAL referrers only** — third-party partner firms, freelance consultants, former clients who introduce new clients, business contacts who send referrals. Internal BD staff earn revenue attribution (not commission) through their base + bonus structure; they are NOT paid on a per-deal commission basis.

Referrer Tiers & Rates

TIER	RATE	PAID ON	CRITERIA
Standard Referrer	5%	First-year revenue (collected)	Any external party making their first referral
VIP Referrer	8%	First-year revenue (collected)	5+ successful referrals · annual value > AED 500K to MICS
Strategic Partner	10%	First 2 years revenue (collected)	Formal partnership agreement · co-marketing · recurring pipeline
Employee Referral	3%	First invoice paid	MICS employee referring an external client · one-off, not team sales
Former Client Referral	Gift, not commission	—	Former clients receive a recognition gift (branded item, meal) — not cash commission, to maintain professional boundary

Commission Tracking Fields

Each external referrer has a Referrer record containing:

- **Referrer Name** (individual or company)
- **Tier** (dropdown: Standard / VIP / Strategic / Employee)
- **Bank Details** (encrypted, Finance-only)
- **Tax Status** (invoice-based / no-invoice · Freelancer / Company)
- **Total Referrals Made** (auto-count)
- **Total Commission Earned** (auto-calc)
- **Commission Pending** (earned, not yet paid)
- **Last Payout Date**

Payout Rules

- Commission is calculated on **collected revenue** only — not invoiced.
- Payout happens **quarterly**, 30 days after quarter close (allows for refund/credit adjustments).

Attendance Tracking

Attendance is tracked at an individual Employee Code level across three staff types — office-based, field-based and remote. The method of check-in differs, but the record and approval flow are identical.

Check-In Methods

STAFF TYPE	METHOD	LOCATION PROOF	NOTES
Office (UAE Dubai)	Office WiFi IP	Office public IP whitelist	Auto on connect; Zoho People app or web
Office (India Ahmedabad)	Office WiFi IP	Office public IP whitelist	Auto on connect
Field / Client Visit	Mobile app + GPS	GPS coordinates logged	Must be within 500m of registered client address or pre-approved location
Remote (India)	VPN + mobile app	VPN session + GPS	Home office address pre-registered; GPS within 1km
Remote (Other)	VPN + 2FA	VPN session only	Cross-border; no GPS required but time-zone tracking active

Late & Absence Rules

- **Standard hours**: 09:00 — 18:00 local office time (offset for remote = home local time)
- **Grace period**: 15 minutes · arrivals after 09:15 flagged "Late"
- **Absence threshold**: 90 minutes with no check-in = "Absent — No Call No Show"; auto-notification to Manager
- **Emergency code**: 911 text to HR = family emergency, converted to Emergency Leave retroactively
- **Flex window**: Senior staff (T4+) can work flex hours with advance notice; still required to log 8-hour days

Monthly Attendance Summary

Every employee receives a monthly summary on the 1st of each month showing:

WORKING DAYS	PRESENT	LATE ARRIVALS	ATTENDANCE %
22	20	2	91%

◆ DISCIPLINARY THRESHOLDS

3 unexplained lates in a month = verbal warning · 3 unexplained absences in 90 days = written warning · 5 unexplained absences in 180 days = PIP review with HR + Manager.

Leave Management

MICS offers nine leave categories aligned with UAE Labour Law and amplified for employee wellbeing. Each category has its own balance, eligibility and documentation requirement.

Leave Category Matrix

CATEGORY	ANNUAL ALLOWANCE	ELIGIBILITY	DOCUMENTATION
Annual Leave	30 calendar days	After probation (90 days)	Request 14 days in advance for >5 days
Sick Leave	15 fully paid + 30 half-paid	From Day 1	Medical certificate for >2 days
Maternity	60 calendar days fully paid	From Day 1	Medical confirmation of pregnancy
Paternity	5 working days	From Day 1	Birth certificate
Hajj / Umrah (once)	30 calendar days	After 2 years service	Travel confirmation
Bereavement	3–5 days (relationship-dependent)	From Day 1	Disclosure only
Study / Exam	10 working days / year	After 1 year service	Enrollment proof
Emergency	3 days	From Day 1	Post-event explanation
Unpaid Leave	Max 60 days / year	Pre-approval	Written request + reason

Leave Application Flow

01
Submit
Employee applies via Zoho People

02
Manager Review
Approve · reject · request change

03
HR Check
Policy compliance · balance check

04
Calendar Update
Team calendar auto-updated

05
Coverage Plan
Employee documents handoff

Approval Routing By Duration

DURATION	APPROVER CHAIN
1 day	Line Manager → HR (info)
2–5 days	Line Manager → HR

New Hire Onboarding · 21 Steps

A structured 21-step onboarding runs over the first 30 days. Steps are grouped into four phases; each step has an owner, deadline and verification checkpoint.

Phase 1 · Pre-Arrival (Steps 1–6)

1. Offer accepted · contract signed · background check clear
2. Employee Code assigned (next sequential EMP-XXXX)
3. Zoho account provisioned (added to relevant shared login group)
4. Email signature generated · LinkedIn update drafted
5. Equipment requisition (laptop · monitor · access cards)
6. Day 1 plan shared with new hire and buddy

Phase 2 · Day 1 (Steps 7–12)

7. Office welcome · tour · meet team
8. HR paperwork · emergency contacts · tax forms · bank details
9. IT setup · passwords · 2FA configured
10. **Employee Code + PIN registered** · first Zoho login
11. Manager 1:1 · role expectations review
12. Buddy pairing · introduction lunch

Phase 3 · Week 1 (Steps 13–18)

13. Compliance training · AML · data privacy · code of conduct
14. Tool training · Zoho CRM for BD / Books for Finance / People for all
15. First assigned task or shadowed engagement
16. Team meetings · cross-department introductions
17. Mid-week check-in with HR
18. End of Week 1 review with Manager · calibration on expectations

Phase 4 · Month 1 (Steps 19–21)

19. First real deliverable completed · feedback received
20. 30-day check-in with Manager + HR · formal review
21. 90-day probation goals set · IDP drafted

Recruitment Pipeline

MICS operates two parallel recruitment functions: internal hiring (for MICS itself) and external recruitment services (a revenue-generating business line for clients). Both use the same pipeline structure in Zoho People + CRM.

Current Open Roles (Internal)

ROLE	TIER	DEPARTMENT	PRIORITY
Corporate Communication Experts	T5	Marketing	High
Tech & AI Experts	T5	Operations / IT	High
Smart Admin + Sales Professionals	T6	BD · Operations	Medium
Business Development Leaders (4)	T5	BD	High

Recruitment Stages

01	02	03	04	05	06
Sourced	**Screened**	**Interview L1**	**Interview L2**	**Offered**	**Placed**
Via LinkedIn, referral, job board	HR phone screen · culture fit	Hiring manager competency	Dept Head + peer panel	Offer letter generated	Accepted · onboarding triggered

Who Should Apply Criteria (from Posting)

HARD CRITERIA

- Problem solvers — evidence of initiative
- Fast learners — demonstrated pace
- Strong communicators — written & verbal
- Ownership mindset — outcome over task

CULTURE CRITERIA

- Ambitious — want more than a job
- Work with visionaries & builders
- Growth-driven — hungry talent
- High-ownership roles appetite

Interview Scorecards & Offer Process

Standardized Scorecard Dimensions

DIMENSION	WEIGHT	WHAT WE ASSESS
Role Competence	30%	Technical skills, relevant experience, quality of past work examples
Ownership & Drive	20%	Evidence of taking initiative, going beyond the task, achievement orientation
Communication	15%	Clarity in writing and speech, ability to explain complex topics simply
Learning Agility	15%	Pace of learning new domains, curiosity, growth trajectory
Culture Fit	10%	Team dynamics, values alignment, working style
Problem Solving	10%	Live problem tackled during interview, structured thinking

Each dimension is scored 1–5. Weighted average determines overall rating: <3.0 = No · 3.0–3.5 = Lean No · 3.5–4.0 = Lean Yes · 4.0+ = Strong Yes.

Offer Generation Workflow

1. **Hiring decision** — panel debrief meeting, consensus required
2. **Compensation proposal** — HR runs band check, proposes package
3. **Approval chain** — Hiring Manager → Dept Head → Partner (for T4+)
4. **Offer letter drafted** — merged from template with candidate data
5. **Verbal offer** — Hiring Manager calls candidate, communicates package
6. **Written offer sent** — Zoho Sign envelope · candidate countersigns
7. **Start date confirmed** — pre-arrival phase begins

◉ OFFER ACCEPTANCE SLA

Candidates are given 7 calendar days to accept or decline an offer. If no response by day 7, a follow-up call from HR clarifies the gap. If no acceptance by day 14, the offer is formally withdrawn.

Marketing & Communication Workflows

Marketing at MICS sits at the front of the revenue funnel. The team operates on a hub-and-spoke model — a central content calendar feeds email, social, web and events.

Marketing Channel Matrix

CHANNEL	PRIMARY PURPOSE	CADENCE	MEASURED BY
LinkedIn Organic	Thought leadership · recruiting	3 posts / week	Impressions · engagement · leads
LinkedIn Paid	Demand generation	Always-on	Cost per lead · CPL by campaign
Email Newsletter	Nurture · retention	Bi-weekly	Open · click · reply rate
Website Blog	SEO · authority	1 article / week	Organic traffic · keyword rank
Events & Webinars	High-intent pipeline	Monthly	Registrations · attendees · SQL rate
Podcast Appearances	Brand awareness	Quarterly	Listens · guest pipeline generated
WhatsApp Broadcasts	Client-only updates	Monthly	Read rate · response rate
Google Ads	High-intent capture	Always-on	CPC · conversion rate · CPL

Attribution Model

Leads are tracked using a multi-touch attribution model:

- **First touch** — the channel that first exposed the lead to MICS (30% weight)
- **Last touch** — the channel that generated the conversion event (30% weight)
- **Middle touches** — all intermediate channels (40% weight, distributed equally)

Campaign Planning Cycle

QUARTERLY	MONTHLY	WEEKLY	WEEKLY
Plan	**Brief**	**Execute**	**Measure**
Theme · budget · KPIs set	Content calendar · creative spec	Publish · amplify · respond	Dashboard · retrospect · adjust

Communication Integration Architecture

Every client and internal conversation must be captured in the CRM. MICS integrates three messaging channels — WhatsApp, SalesIQ live chat and Zoho Cliq — to ensure no interaction is lost or siloed.

WhatsApp Business API

- **Inbound**: New contact → auto-creates Lead or attaches to existing Contact. Transcript posted to the Lead/Account record.
- **Outbound**: Template messages (appointment reminders, VAT filing confirmation, document requests) sent from CRM.
- **Logged**: Every message attributed to the sending Employee Code.
- **Opt-in**: Clients must opt-in to WhatsApp communication at onboarding; opt-in date logged.

SalesIQ Live Chat

- **Website widget**: Offers chat during business hours; after-hours shows email form.
- **Visitor tracking**: Records pages visited, time on site, referrer — creates "Visitor" record.
- **Chat-to-lead**: When visitor shares email/phone, Visitor converts to Lead automatically.
- **Transcript archived**: Full chat history attached to Lead; searchable later.

Zoho Cliq (Internal)

- **Team channels**: #deals · #approvals · #execution-ops · #hr-updates · #all-hands
- **Automated notifications**: Deal won, proposal approved, SLA breached, new hire starting
- **Approval actions**: Some approvals can be actioned directly from Cliq (thumbs-up vote)
- **Client-facing channels**: Premium clients get a dedicated Cliq channel with Exec + BD

◉ NO SHADOW CHANNELS

Personal WhatsApp, personal email and informal chat groups are NOT permitted for client communication. Every touch must go through an approved, logged channel. Auditors can trace any conversation by Employee Code and date.

Document Management & Drive Structure

- Invoices generated → `01 — Clients / [Client] / Invoices & Receipts / [YYYY] /`
- Email correspondence → `01 — Clients / [Client] / Correspondence Archive / Email / [YYYY-MM] /`

Client Portal Credentials Vault

To deliver regulatory filings, MICS holds login credentials to multiple government and banking portals on behalf of its clients. These credentials are the most sensitive data in the system and require the strongest controls.

Portals Managed

PORTAL	AUTHORITY	USED FOR	CREDENTIAL TYPE
FTA	Federal Tax Authority	VAT returns · Corp Tax · Excise	TRN · Username · Password · MFA
DED	Dept. of Economic Development	Trade licensing · renewals	License # · Username · Password
MOF	Ministry of Finance	Corporate Tax portal · ESR	Entity ID · Password · MFA
GDRFA	General Directorate of Residency	Visas · entry permits · EID	Establishment Card · Password
ICP	Identity & Citizenship	Emirates ID · work permits	UID · Password
Banking	Various banks	Statement download for reconciliation	Account # · View-only login (never transactional)
Insurance	Daman / Oman Insurance / Others	Employee health insurance administration	Employer code · Password

Security Controls

- **Encryption**: AES-256 at rest, TLS 1.3 in transit
- **Access**: Only the Execution Owner(s) assigned to that client's services can view credentials; other staff see masked values
- **Audit**: Every password reveal is logged with Employee Code + timestamp + IP
- **Rotation**: Credentials rotated quarterly for Banking, annually for government portals
- **Breach protocol**: If a client credential is suspected compromised, MICS notifies client within 1 hour and initiates password reset with client
- **Departure protocol**: When an employee leaves, their view access is revoked within 1 hour; ability to log into shared departmental login also revoked

◉ CLIENT CONSENT

Every credential entry requires documented client consent — a signed authorization letter (template ID `AUTH-CRED-01`) on file. Without this letter, credentials cannot be stored.

Automation Rules Reference · AUTO-001 → 025

All 50+ automation rules are versioned in Zoho Flow and catalogued here. Each rule has a unique code, trigger, condition, action and owning domain.

CODE	RULE NAME	TRIGGER	ACTION
AUTO-001	New web lead routing	Form submission	Round-robin assign · Cliq notify owner
AUTO-002	WhatsApp inbound capture	New WA message	Create Lead · attach transcript
AUTO-003	Lead score calculation	Lead field change	Recalculate 0–100 score · flag Hot
AUTO-004	Hot lead SLA alert	Score ≥ 80 · no touch in 1h	SMS + Cliq ping owner + manager
AUTO-005	Lead stale warning	No activity in 14d	Email owner + manager
AUTO-006	Deal stage aging	> 2× stage SLA	Flag "Stalled" · notify manager
AUTO-007	Close date in the past	Daily check	Email owner · require update in 3d
AUTO-008	Single-threaded warning	Deal with 1 contact for 7d	Cliq ping · suggest multi-thread
AUTO-009	Discount approval routing	Discount field populated	Route to appropriate tier
AUTO-010	Concession creep alert	Cumulative concession > 15%	Re-approval from Partner required
AUTO-011	Proposal expiry reminder	T-7, T-1 days	Email owner · auto-void on expiry
AUTO-012	Proposal approval chain	Proposal submitted	Route per deal size matrix
AUTO-013	Engagement letter archive	Zoho Sign completion	Save PDF to Drive · notify both parties
AUTO-014	Invoice auto-generate	Deal stage = Signed	Create invoice per deposit terms
AUTO-015	Payment gate status	Books payment received	Update gate status · if CLEARED → WO
AUTO-016	WO auto-create	Gate CLEARED	Create WO · assign Exec Owner · 6–item handoff
AUTO-017	Handoff meeting schedule	WO created · deal > 100K	Auto-schedule via Zoho Meeting
AUTO-018	SLA missed D+1	Task / service due · not done	Notify Exec Owner
AUTO-019	SLA escalation D+3	Still not done	Notify Manager
AUTO-020	SLA escalation D+7	Still not done	Notify Dept Head + BD Owner
AUTO-021	Quarterly reminder schedule	Service = Quarterly	T-30/14/7/3/0 reminders
AUTO-022	Yearly reminder schedule	Service = Yearly	T-60/30/14/7/3/0 reminders
AUTO-023	Renewal forecast create	WO close date	Create T-120 renewal deal in pipeline

Automation Rules Reference · AUTO-026 → 050

CODE	RULE NAME	TRIGGER	ACTION
AUTO-026	Client health score	Daily recompute	Update Health Score · flag < 80
AUTO-027	At-Risk client alert	Health < 80	Notify Account Mgr · draft recovery plan
AUTO-028	Churn classification	180d post expected renewal	Mark Churned · nurture enrollment
AUTO-029	Referral commission calc	Invoice paid & referrer present	Create payable for referrer
AUTO-030	Quarterly commission payout	Quarter close + 30d	Batch payout with CFO approval
AUTO-031	Commission clawback	Credit note issued	Reduce referrer payable or claw back
AUTO-032	Attendance late flag	Check-in > 09:15	Flag Late · notify after 3 in month
AUTO-033	Absence no-call alert	No check-in by 10:30	Notify manager · HR
AUTO-034	Leave balance reminder	Q4 start	Show "days unused" to prevent hoarding
AUTO-035	Leave approval routing	Leave submitted	Route by duration per §13 matrix
AUTO-036	Onboarding checklist	New hire start date	Generate 21-step tasks · assign owners
AUTO-037	Probation review trigger	+90d from start	Schedule review · open IDP
AUTO-038	Performance review cycle	Q2 + Q4 start	Open self-assessment for all staff
AUTO-039	Training expiry alert	T-30 days from cert expiry	Notify employee + manager
AUTO-040	Document auto-file	Doc uploaded with tags	Move to Drive per tag mapping
AUTO-041	Credentials reveal audit	Any password shown	Log Employee Code · IP · timestamp
AUTO-042	Credentials rotation	Quarterly	Alert Exec Owner to rotate banking
AUTO-043	Marketing attribution	Lead → Deal conversion	Calculate multi-touch attribution · update channel ROI
AUTO-044	Campaign budget alert	80% budget consumed	Notify marketing lead · pause ads if 100%
AUTO-045	NPS survey dispatch	WO closed + 14d	Send CSAT + NPS survey via email
AUTO-046	NPS detractor alert	NPS ≤ 6	Notify Account Mgr · schedule follow-up
AUTO-047	Cliq approval digest	Hourly	Push pending approvals to approvers' Cliq
AUTO-048	Weekly pipeline report	Monday 09:00	Email pipeline health to BD + Managers
AUTO-049	Monthly attendance report	1st of month	Email summary to each employee + manager
AUTO-050	Quarterly renewal forecast	Quarter start	Generate forecast by department · email Partners

Access Control Matrix

Access is role-based and scope-limited. The matrix below defines what each tier can see and do across the system's major data objects.

DATA OBJECT	PARTNER (T2)	DEPT HEAD (T4)	BD (T5/T6)	EXEC (T6) ASSIGNED	EXEC (T6) OTHER	HR / SUPPORT
Leads	Full	Full	Own + team	—	—	—
Accounts · Financial Data	Full	Full	Full	Full (assigned)	Masked	—
Deal Amount · Contract	Full	Full	Own + team	Read (assigned)	—	—
Portal Credentials	Full	Full	—	Full (assigned)	—	—
Invoices & Payments	Full	Full	Own deals	View only	—	Accounts only
Work Orders	Full	Full	Read (own deals)	Full (assigned)	Own dept	—
HR · Personal Records	Full	Own team	Own only	Own only	Own only	Full

Audit Log & Security Posture

What Is Logged

EVENT CATEGORY	RETENTION	FIELDS CAPTURED
Record Create	7 years	Employee Code · Record ID · Module · Timestamp · Source IP
Record Edit	7 years	Employee Code · Record ID · Field changed · Old value · New value · Timestamp
Record Delete	7 years + soft delete	Employee Code · Record ID · Reason · Timestamp (hard delete after retention)
Record View (sensitive)	7 years	Employee Code · Record ID · Timestamp · IP (only for Financial, HR, Credentials)
Export (any data)	7 years	Employee Code · File hash · Row count · Timestamp · Destination
Credential Reveal	7 years	Employee Code · Client · Portal · Timestamp · IP
Permission Change	7 years	Admin Code · Target Employee · Old role · New role · Timestamp · Justification
Login (success / fail)	1 year	Employee Code · IP · Device · User Agent · Outcome · Timestamp
PIN failure lock	1 year	Employee Code · Attempts · Lock duration · Auto-unlock time

Immutability Guarantees

- **Handler History** (ownership changes) — append-only, cannot be deleted or edited.
- **Audit log** — cryptographic chain of hashes; any tamper is detectable.
- **Signed Engagement Letters** — the folder is WORM (Write Once Read Many) protected.
- **Invoices issued** — never deleted; only superseded by credit notes which reference them.

Compliance Certifications

- **ISO 27001** — Information security management (target: 2027)
- **UAE Personal Data Protection Law (PDPL)** — compliant from Dec 2025
- **FTA Tax Agency licensing** — MICS is an FTA-registered Tax Agent
- **ICAI / ACCA memberships** — individual practitioner certifications

Integration Architecture

MICS operates 14 Zoho applications plus 4 external integrations, orchestrated through Zoho Flow. Every app writes to and reads from a unified data layer; employee codes and client IDs are the two primary join keys.

Zoho Application Stack

APPLICATION	PRIMARY USE	KEY INTEGRATIONS
Zoho CRM	Leads · Deals · Accounts	Books (invoices) · Sign (proposals) · Projects (WO) · Cliq (alerts)
Zoho Books	Invoicing · Payments · GL	CRM (deal → invoice) · Bank feed · Analytics
Zoho People	Employees · Attendance · Leave	CRM (Employee Codes) · Payroll · Analytics
Zoho Sign	E-signature · EL & contracts	CRM · WorkDrive
Zoho Flow	Cross-app automation · 50+ rules	All apps + external webhooks
Zoho Analytics	Dashboards · reports · attribution	Reads from CRM · Books · People · Marketing
Zoho Forms	Website capture · onboarding forms	CRM · People
Zoho SalesIQ	Website live chat · visitor tracking	CRM (chat → lead)
Zoho Marketing Plus	Email · social · campaign mgmt	CRM · Analytics
Zoho Cliq	Internal team chat · alerts	CRM · Flow · Projects
Zoho Mail	Email · email-to-CRM	CRM (email thread attach)
Zoho WorkDrive	Document storage · versioning	CRM · Sign · Books
Zoho Projects	Work Order tasks · SLA tracking	CRM · People · Cliq
Zoho Meeting	Video calls · handoff meetings	CRM · Cliq · Mail (calendar)

External Integrations

- **WhatsApp Business Cloud API** — inbound lead capture, outbound template messages
- **3CX PBX** — phone calls, recording, click-to-dial from CRM
- **Bank feed (Finshape / local bank APIs)** — statement auto-import for reconciliation

- **Clearbit / LinkedIn Sales Nav** — lead enrichment (industry, employee count, tech stack)

Data Flow Summary

A lead enters via **Forms / SalesIQ / WhatsApp** → lands in **CRM** → enriched via **Clearbit** → qualified by BD → **Sign** dispatches engagement letter → upon signing, **Books** auto-generates invoice → once paid, **Projects** creates Work Order → **People** tracks Exec delivery → **Analytics** rolls up all of the above into dashboards → **Cliq** notifies humans at every critical transition.
